

HOW TO MAKE THE BIRD FEEDER
 This feeder uses two different kinds of lines: solid and dotted. The **SOLID** lines show you where to cut the birdfeeder. The **DOTTED** lines are outward folds or folds that will be made away from you. You will be able to see them on the outside of the crease once you make the fold. All the fold lines are numbered in the order you should make your folds.
 Find four paper clips. They will be used to connect the roof to the feeder base. The X marks indicate where to poke a hole with your paper clip in order to connect the two pieces together. Once finished, poke a hole in the center top of the feeder roof, attached some yard and hang your feeder.
